

Conveyor Toaster

The Dualit Conveyor Toaster is easy to use, quick to heat up and can handle busy breakfast services with ease. The 2 slice Conveyor Toaster works perfectly for larger catering establishments, producing up to 560 slices of white toast or 1,200 slices of thinner fruit loaf an hour. The Conveyor Toaster is versatile enough to toast bread as well as warm bagels/buns by switching off the top element. The Conveyor Toaster also features a toast ramp to ensure toast, bagels and buns are removed smoothly and an anti-tamper guard so the toast setting dial can't be changed in buffet service.

Fast, hardworking Incoloy elements

Powered by Incoloy elements, the Conveyor Toaster is ready to use in just five minutes with the quick start procedure and will continue to heat up for 30 minutes until it reaches fully warm. Strong and robust, the elements contain no glass or iron components making them less susceptible to breakage.

Full control

A bagel setting heats the bottom element only, making it ideal for toasting bread, buns and bagels on one side. The nine browning levels enable a wide range of bread types to be toasted to perfection. Select the Standby setting for quiet periods; it saves energy and allows the toaster to get back up to full heat quickly when required.

Built to last

With certain parts replaceable and a quick release side panel, the Conveyor Toaster offers easy access for servicing and cleaning. Together with a removable crumb tray and robust elements, the Conveyor Toaster is built to last.

Product spec:

- Strong and robust incoloy elements
- Bagel setting to heat bottom element only for toasting bagels, buns etc.
- Dualit Crunch Test approved over quiet and busy periods
- Standby setting to conserve up to 70% energy
